Our Sun Had A Brother?!!!

By: Celeena B. Scott

A Sophomore - "One time, I was watching a "What If..." video about this," What if the Solar System had 2 Suns?"

The video also said that scientist believed that there used to be two stars. One, our Sun, and the other.....a reddish, blackish-brown dwarf named Nemesis."

And that's not it from here. Scientists say "Been born with an evil twin brother" as a famous quote to say that it has been here before! Scientists do say that all stars were born with another, or two at a time... Well, Nemesis is a theoretical dwarf star thought to be a companion to our sun. The theory was postulated to explain a perceived cycle of

mass extinctions in Earth's history. Scientists speculated that such a star could affect the orbit of objects in the far outer solar system, sending them on a collision course with Earth.

While recent astronomical surveys failed to find any evidence that such a star exists, a 2017 study suggests there could have been a "Nemesis" in the very ancient past.

"The ***Nemesis Theory*** is an outgrowth of the discovery that the impact of a large comet or asteroid may have been responsible for the great mass extinction," Douglas Vakoch, president of a nonprofit called Messaging Extraterrestrial Intelligence, told Business Insider. The logic was that ***the five extinctions*** that have occurred on Earth to date happened at regular intervals. So some scientists believe that may explain by a cyclical pattern of intense comet activity, which could be caused by the presence of another star in our solar system.

A Sophomore - "This really reminds of the Movie "Ice Age: Course Collison", because I remember Buck the Weasel saying that this happened 3 times with others before they even existed." Well, where is it exactly? Studies show that it might be at the ***Oort cloud***. If Nemesis traveled through the Oort

cloud every 27 million years, some argue, it could kick other comets out of the sphere and send them hurtling toward the inner solar system — and Earth. Impact rates would increase, and mass extinctions would be more common.

The ***Kuiper Belt***, a disk of debris that lies inside of the solar system, also has a well-defined outer edge that could be sheared off by a companion star. Researchers have found other systems where a companion star seems to have affected the shape of the debris disks. The dwarf planet ***Sedna*** lends further credence in the eyes of some to the existence of a companion star to the sun. With an orbit of up to 12,000 years, the planet presents a puzzle to many. Scientists have suggested that a massive object such as a dim star could be responsible for keeping Sedna so far from the sun.

The Ghost Did It !

When I asked Ms. England, she said, "3 years ago, I was sitting in what's now the social skills room a few days before school started. I was some setup and happened to sit down at the desk in the front of the room to send an email. The chairs were all stacked up in the back of the room. As I wrote the e-mail an entire stack of chairs (At least 6-7 Chairs) Just randomly fell over." She hadn't been anywhere near them at any point that day, so it's not like they were moved around. The clock also in that room used to stop at 11:15 every day, even when she reset it. It seems bizarre too I believe that ghost did it but that's my opinion. If you think differently please feel free to tell us.

School By Dianna Fields

If any of you remember we had a teacher last year, her name was Ms. Gonzalez, she created a class called S.T.E.M. which was renamed S.T.R.E.A.M. Which stands for Science, Technology, Reading, Engineering, Art, and Math & Music. Mr. Davis says "It is important to learn about bridges because it takes a lot of science into building a bridge." This class was made to expand the learning capabilities of students. The stream class plans on making castles in the future. They would also like to do some kind of egg project but needs space to do it.

This school is for kids with ADHD and Autism By Lorelai Charlton

This school is really cool in different ways like the kids here are all special in their own ways and you can make friends that are kinda like you in are own ways too.

What Celeena says about this school is that she would like the teachers to help the students more but not all the students though most of the students and she wants to help certain students too.

Jaguars reportedly trade for Steelers backup quarterback in wake of Nick Foles injury

By Donyae White

Look If I'm being honest, I don't watch football at all, but I do know that Nick Foles broke his collarbone. Former Super Bowl MVP, Nick Foles, has suffered a collarbone injury on Sunday afternoon against the Kansas City Chiefs. They signed him in March to a four year \$88 million deal contract. Jaguars head coach Doug Marrone has confirmed that Nick will undergo surgery on Monday. Best case scenario he will be back in six weeks keep in mind I said **Best Case scenario**. I've read that the Jaguars traded a 2020 fifth-round pick to the Pittsburgh Steelers for quarterback Joshua Dobbs.

Skylar Richardson trial: Prosecutors play 2nd police interrogation video for jurors

In Lebanon Ohio the trial of Skylar Richardson is expected to continue Monday of murder of burying her new born baby in the backyard in 2017. Richardson Who is now 20 ,is expected to watch her second police interview along with a jury who will ultimately decide her fate.All evidence points to homicide but the exact cause of death can't be determined if convicted Richardson faces the possibility of life in prison. It is not clear if she will testify in her own defense.

World News
By Hailey Boling

Today is September 11, 2019. 18 years ago today was a terrorist attack when two planes crashed into the twin towers in New York. It is devastating how thousands of innocent people died. The people in the building didn't know that they would not be going home to their families that night. 2,753 died on September 11, 2001 from the terrorist attack.

India has located the lander from its Chandrayaan-2
By Jordan Holloway

2 Missions to a soft land. "There is a rover on the moon but has not yet able to establish communication," India's space agency said. The historic mission appeared to end in failure on Saturday after scientists lost contact with the Vikram lander moments before touching down on the lunar surface.
